

## Basic HTML

21

## Hypertext Markup Language (HTML)

- Describes the *content* and *structure* of information on a web page
- Not the same as the presentation (appearance on screen) -- not “WYSIWYG”
- Surrounds text content with opening and closing tags
- Each tag's name is called an element
  - syntax: `<element> content </element>`
  - example: `<p>This is a paragraph</p>`

22

# history

## □ **html(1990), xhtml(2000), html5(2009)**

### □ 1990s (HTML)

- internet is very slow, few people use it
- Tim Berners-Lee introduces a markup language while at CERN\*

*\*conseil européen pour la recherche nucléaire*

### □ 2000s (XHTML)

- internet much faster, much more information is exchanged there
- attempt to create an extensible language, with better (more rigid) specification
- Uses a markup format called XML XML + HTML = XHTML
- A strict XHTML page uses some different syntax and tags than HTML

For your information

23

### □ 2010s (HTML 5)

- smartphones, Internet is quite ubiquitous
- lots of multimedia information (audio, video, documents, pictures, new articles, etc.)
- features
  - support for the latest multimedia and other new features
    - drag-and-drop, web messaging...
  - easily readable by humans and consistently understood by computers
  - more flexible than XHTML
  - backwards-compatibility with earlier HTML and XHTML

For your information

24

## Example of a simple web page Not WYSIWYG

**WYS**

```
<!doctype html>
<html lang="en">
<head>
  <title>My Web Page</title>
</head>

<body>
<h2>A heading </h2>
<p>A paragraph ...</p>
<p>Another paragraph ...</p>

<a href="http://yorku.ca">link to York University</a>
<h3>A sub-heading</h3>
<p> yet another paragraph ...</p>

</body>
</html>
```

**WYG**

A text file with .html extension.

Note the URL:  
file:///C:/ ...  
EXAMPLE.html

27

## Basic Structure of a Web Page

```
<html>           root
  <head>
    ...           descriptive
  </head>         elements

  <body>
    ...
    ...
  </body>
</html>
```

- `<html></html>` outline the HTML document
- `<head></head>` contain information about the document (e.g., author, keywords)
- `<body></body>` contain the main content of the web page
- Spacing within the HTML file typically does not affect its correctness or appearance, but is done to aid in human readability
- Significant tags are usually on a line by themselves
- Lines between significant tags are usually indented for human readability

28

## Some HTML Tags

- Element content
  - Text
  - Other elements
  - empty

<code>&lt;p&gt;...&lt;/p&gt;</code>	text that should be treated as a separate <b>paragraph</b>	
<code>&lt;br/&gt;</code>	forced <b>line break</b>	Empty tag
<code>&lt;hr/&gt;</code>	<b>horizontal rule</b> across page	Empty tag
<code>&lt;ul&gt;...&lt;/ul&gt;</code>	<b>unordered list</b> (usually bullets)	
<code>&lt;ol&gt;...&lt;/ol&gt;</code>	<b>ordered list</b> (e.g. numbered)	
<code>&lt;li&gt;...&lt;/li&gt;</code>	<b>list item</b>	
<code>&lt;h1&gt;...&lt;/h1&gt;</code>	<b>level 1 heading</b> (also h2, h3,...h6)	
<code>&lt;div&gt;...&lt;/div&gt;</code>	<b>division</b> (area) with special characteristics	
<code>&lt;span&gt;...&lt;/span&gt;</code>	texts with special characteristics	
<code>&lt;img /&gt;</code>	displays an <b>image</b> file	Empty tag
<code>&lt;a&gt;...&lt;/a&gt;</code>	hypertext link <b>anchor</b>	
<code>&lt;!-- ... --&gt;</code>	"..." replaced by any <b>comment</b> (i.e., any description, note, or memo for human use)	

29

29

## Tag Attributes

Provide additional characteristics for a tag

Syntax: `attrName="value"`

### Examples:

```

```

Displays the image indicated by `src` (path or URL) and restricts the image to 300 pixels wide, by 200 pixels high

Empty tag!

```
<a href="http://www.yorku.ca">York University</a>
```

Displays "York University" as a hyperlink to the path or URL indicated by `href` (in this case, `www.yorku.ca`)

A full reference of HTML tags and attributes are available at [www.w3schools.com](http://www.w3schools.com)

30

## Comments <!-- ... -->

```
<!-- My web page, by Bob Student
EECS 1012, W 2022 -->
<p>EECS 1012 courses are <!-- NOT --> a lot of fun!</p>

<!-- <p>CS courses are <!-- NOT --> a lot of fun!</p>
-->
```

HTML

EECS 1012 courses are a lot of fun!

output

- Comments are useful for disabling sections of a page
- Comments cannot be nested and cannot contain a --

34

## html: elements for head

### □ descriptive element examples:

- `<meta>` data about the document: e.g., what the character encoding for the doc is
- `<title>` the document title
- `<link>` to (implicitly) link the document to another resource, e.g. to a css file
- `<script>` to run a script file, such as javascript file

```
<head lang="en">
  <meta charset="utf-8">
  <title>my first HTML doc</title>
  <link rel="stylesheet" href="cssFiles/main.css" type="text/css">
  <script src="js/first.js"></script>
</head>

<body>
  ...
</body>
```

35

## Page Title <title>

```
...
<head>
  <title> Sue Armstrong's first Page </title>
</head>
...
```

HTML

- Placed within the head of the page
- Displayed in web browser's title mark and when bookmarking the page

36

## Web page metadata <meta>

```
<head>
<meta charset="UTF-8">           <!-- international char set used -->
<meta name="Generator" content=""> <!-- software used -->
<meta name="Author" content="">   Empty tag
<meta name="Keywords" content=""> <!-- suggest search engine -->
<meta name="Description" content=""> <!-- description of page -->
<meta name="viewport" content="width=device-width,
                                initial-scale=1.0">

<title>Document</title>
</head>
```

HTML

- information about your page (for a browser, search engine, etc.)
- placed in the head of your HTML page
- meta tags often have both the name and content attributes

37

## Some HTML Tags in body

- Element content
  - Text
  - Other elements
  - empty

<code>&lt;p&gt;...&lt;/p&gt;</code>	text that should be treated as a separate <b>paragraph</b>	
<code>&lt;br /&gt;</code>	forced <b>line break</b>	Empty tag
<code>&lt;hr /&gt;</code>	<b>horizontal rule</b> across page	Empty tag
<code>&lt;ul&gt;...&lt;/ul&gt;</code>	<b>unordered list</b> (usually bullets)	
<code>&lt;ol&gt;...&lt;/ol&gt;</code>	<b>ordered list</b> (e.g. numbered)	
<code>&lt;li&gt;...&lt;/li&gt;</code>	<b>list item</b>	
<code>&lt;h1&gt;...&lt;/h1&gt;</code>	<b>level 1 heading</b> (also h2, h3,...h6)	block tag
<code>&lt;div&gt;...&lt;/div&gt;</code>	<b>division</b> (area) with special characteristics	block tag
<code>&lt;span&gt;...&lt;/span&gt;</code>	<b>inline</b> texts with special characteristics	Inline tag
<code>&lt;img /&gt;</code>	displays an <b>image</b> file	Empty tag inline tag
<code>&lt;a&gt;...&lt;/a&gt;</code>	hypertext link <b>anchor</b>	inline tag
<code>&lt;!-- ... --&gt;</code>	"..." replaced by any <b>comment</b> (i.e., any description, note, or memo for human use)	

38

38

## Block and Inline Statements

- **Block** elements contain an entire large region of content
  - examples: paragraphs, lists, table cells
    - `<h1>-<h6>` `<div>` `<p>` `<ul>` `<ol>`
  - the browser places a margin of whitespace between block elements for separation

39

## Block and Inline Statements (cont.)

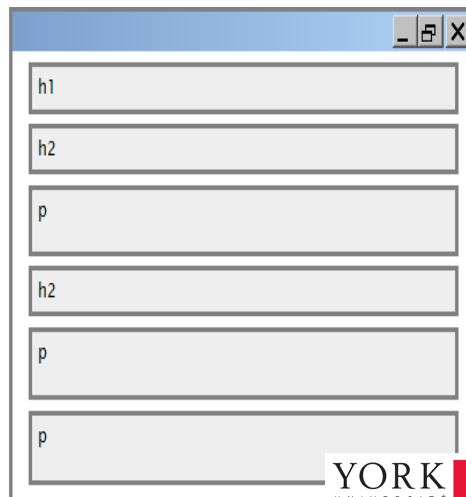

- **Inline** elements affect a small amount of content
  - examples: bold text, code fragments, images  
`<span>` `<a>` `<img>` `<em>`...
  - the browser allows many inline elements to appear on the same line
  - should be nested inside a block element

40

## Document Flow – block elements

```
<body>
  <h1>...</h1>
  <h2>...</h2>
  <p>...</p>
  <h2>...</h2>
  <p>...</p>
  <p>...</p>
</body>
```

41

## Document flow - inline elements

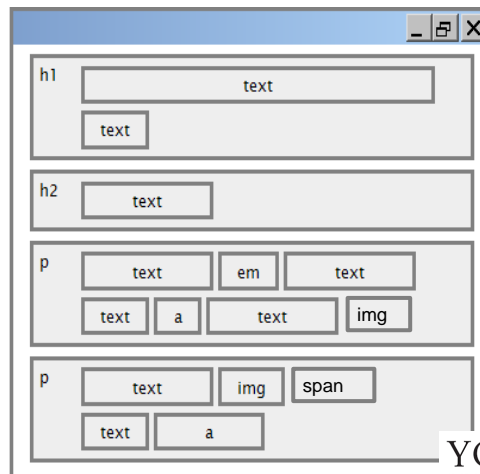

```
<body>
  <p>
    Today, <em> 24 hrs only </em>, blowout sale!
    See our <a href="..."> products </a> page for
    more info. And the image here <img src=... \>
  </p>
</body>
```

42

## Document flow - a larger example

- Both block and inline elements can be nested inside block elements;
- Inline element can be nested inside block and inline element;
- Block element *cannot* be nested inside an inline element;

[https://www.w3schools.com/html/html\\_blocks.asp](https://www.w3schools.com/html/html_blocks.asp)

43

## Paragraph <p>

```
...
    <body>
        <p> Harry Potter and the Deathly Hallows,
the last book in the series, begins directly after the
events of the sixth book.
Voldemort      has completed his ascension to power and
gains          control of the Ministry of Magic </p>
    </body>
...
```

HTML

Harry Potter and the Deathly Hallows, the last book in the series, begins directly after the events of the sixth book. Voldemort has completed his ascension to power and gains control of the Ministry of Magic

output

- Placed within the body of the page

block

44

## Headings <h1>, <h2>, ... <h6>

```
<h1> Harry Potter </h1>
<h2> Books </h2>
<h3> Harry Potter and the Philosopher's Stone </h3>
```

HTML

**Harry Potter**  
**Books**  
**Harry Potter and the Philosopher's Stone**

output

45

## Horizontal rule <hr />

```
<h1> Harry Potter </h1>  <hr />
<h2> Books </h2>
<h3> Harry Potter and the Philosopher's Stone </h3>
```

HTML

# Harry Potter

## Books

### Harry Potter and the Philosopher's Stone

output

❑ <hr> or <h />

preferred

46

## Line Break <br>

```
<p>One Ring to rule them all, One Ring to find them, <br />
One Ring to bring them all and in the darkness bind
them.</p>
<p> In the Land of Mordor where the Shadows lie. </p>
```

HTML

One Ring to rule them all, One Ring to find them,  
One Ring to bring them all and in the darkness bind them

In the Land of Mordor where the Shadows lie.

output

❑ <br> or <br/>

❑ br should not be used to separate paragraphs or  
used multiple times in a row to create spacing

48

## Phrase elements `<em>`, `<strong>`

```
<p>
HTML is <em>really</em>,
<strong>REALLY</strong> fun!
</p>
```

HTML

HTML is *really* **REALLY** fun!

output

- **em**: emphasized text (usually in italic)
- **strong**: strongly emphasized text (usually in bold)
- The tags must be properly nested for a valid page
- **Discouraged**. Should be done in CSS

Lab2 +

49

## Unordered list: `<ul>`, `<li>`

```
<ul>
  <li>No shoes</li>
  <li>No shirt</li>
  <li>No problem!</li>
</ul>
```

HTML

- No shoes
- No shirt
- No problem!

output

- **ul** represents a bulleted list of items (block)
- **li** represents a single item within the list (block)
- can make lists with other bullets using CSS

51

## More about unordered lists

```
<ul>
  <li>Harry Potter characters:
    <ul>
      <li>Harry Potter</li>
      <li>Hermione</li>
      <li>Ron</li>
    </ul>
  </li>
  <li>LOTR characters:
    <ul>
      <li>Frodo</li>
      <li>Bilbo</li>
      <li>Sam</li>
    </ul>
  </li>
</ul>
```

HTML

- Harry Potter characters:
  - Harry Potter
  - Hermione
  - Ron
- LOTR characters:
  - Frodo
  - Bilbo
  - Sam

output

52

## Ordered list <ol>

```
<p>Apple business model:</p>
<ol>
  <li>Beat Microsoft</li>
  <li>Beat Google</li>
  <li>Conquer the world!</li>
</ol>
```

HTML

Apple business model:

1. Beat Microsoft
2. Beat Google
3. Conquer the world

output

- ❑ **ol** represents a numbered list of items
- ❑ Can also be nested and/or mixed with <ul>
- ❑ we can make lists with letters or Roman numerals using CSS

54

## Sections of a page <div>

block

```
<div class="shout">
<h2>Coding Horror! Coding Horror!</h2>
<p> See our special deal on Droids!</p>
<p>We'll beat any advertised price!</p>
</div>
```

HTML

### Coding Horror! Coding Horror!

See our special deal on Droids!

We'll beat any advertised price!

output

- ❑ Tag used to indicate a logical section or area of a page
- ❑ Has **no appearance by default**, but you can apply styles to it
- ❑ HTML5 semantic tags <header> <footer> <section> .....

55

## Inline Sections <span>

```
<h2>Coding Horror! Coding Horror!</h2>
<p>See our <span class="special">special</span> deal on
Droids!</p>
<p>We'll beat <span class="shout"> any advertised
price</span>!</p>
```

HTML

### Coding Horror! Coding Horror!

See our special deal on Droids!

We'll beat any advertised price!

output

- ❑ **has no appearance by default**, but you can apply a style or ID to it, which will be applied to the text inside the span

56

## More HTML tags

- Some tags can contain additional information called attributes
  - syntax:
 

```
<element attribute="value" attribute="value"> content
</element>
```
  - example: `<a href="page2.html">Next page</a>`

## More HTML tags

- Some tags don't contain content; can be opened and closed in one tag
  - syntax:
 

```
<element attribute="value" attribute="value" />
```
  - example: `<hr />`
  - example:
 

```

```

## Images <img>

```

```

HTML

- The **src** attribute specifies source of the image URL
  - Can be local or on the web `./images` `../images`
- HTML5 also requires an **alt** attribute describing the image

64

## More about images

```
<figure>
  
  <figcaption>A place to visit</figcaption>
</figure>
```

HTML

A place to visit

- HTML5

66

## Links <a>

```
<p>
Search
<a href="http://www.google.com/">Google</a> now!
</p>
```

HTML

Search [Google](http://www.google.com/) now!

output

- ❑ The **href** attribute specifies the destination URL
- ❑ Links or *anchors* are inline elements, so they must be placed inside a block element such as a <p> or <h1>

67

## More about anchors

```
<p>book <a href="deathlyHallows-book.html">Harry Potter
and the Deathly Hallows Book</a> </p>
```

```
<p>search <a href="http://en.wikipedia.org"
title="Search">Wikipedia</a> frequently</p>
```

HTML

Book [Harry Potter and the Deathly Hallows](#)

Search [Wikipedia](#) frequently

output

- ❑ Types of URLs that can appear in anchors:
  - Absolute: to another web site
  - Relative: to another page on this web site

```
href="others/other.html"
```

68

# images as link

```
<a href="http://www.yorku.ca/">  
    
</a>
```

HTML

- If placed inside an anchor, the image will become a link

YORK  
UNIVERSITY

“Inline inside block”

®	&reg;	&#174;	Registered Trade Mark
♠	&spades;	&#9824;	Black Spade Suit
♣	&clubs;	&#9827;	Black Club Suit
♥	&hearts;	&#9829;	Black Heart Suit
♦	&diams;	&#9830;	Black Diamond Suit (except Verdana font)

`<p>I will display &euro;</p>`  
`<p>I will display &#8364;</p>`

I will display €  
 I will display €

81

## HTML forms

- **form:** a group of UI controls that accepts information from the user and sends the information to a web server
- the information is sent to the server as a query string

The screenshot shows a web form with the following elements:

- A single-line text input field at the top.
- A text area labeled "Add Comments Here" with a vertical scrollbar.
- Four radio buttons labeled "Value 1", "Value 2", "Value 3", and "Value 4".
- Five checkboxes labeled "Value 1", "Value 2", "Value 3", "Value 4", and "Value 5".
- Two buttons at the bottom: "Submit" and "Reset".

86

## HTML form: <form>

```
<form action="Server URL">
  form controls
  ...
</form>
```

HTML

- required **action** attribute gives the URL of the page that will process this form's data
- when form has been filled out and **submitted**, its data will be sent to the action's URL

Input field

Text area:

Selection box:

Radio button:

Checkbox:

Button:

(text box): a single line of alphanumeric input

a multi-line area for alphanumeric input

a pull-down menu of options

select only one of multiple options

select any number of options

a clickable area to trigger an action

87

## Form controls: <input>

```
<input type="text" name="p" />
<input type="text" name="q" value="Colbert Report" />
<br><br>
<input type="submit" value="OK" />
```

HTML

- **input** element is used to create many UI controls
  - an inline element that **MUST** be self-closed
- **name** attribute specifies name of query parameter to pass to server
- **type** can be text, checkbox, file, hidden, password, radio, reset, submit, button, ...
- **value** attribute specifies control's initial text

91

## Check boxes: <input>

```
<input type="checkbox" value="lettuce" /> Lettuce
<input type="checkbox" value="tomato" checked="checked" /> Tomato
<input type="checkbox" value="pickles" /> Pickles
```

HTML

☐ Lettuce ☒ Tomato ☐ Pickles

- ☐ none, 1, or many checkboxes can be checked at same time

## Radio buttons: <input>

```
<input type="radio" name="cc" value="visa" checked="checked" /> Visa
<input type="radio" name="cc" value="mastercard" /> MasterCard
<input type="radio" name="cc" value="amex" /> American Express
```

HTML

☒ Visa ☐ MasterCard ☐ American Express

- ☐ grouped by name attribute (only one can be checked at a time)
- ☐ must specify a value for each one or else it will be sent as value on

## Drop down lists: <select>, <option>

```
<select name="favoritecharacter">
  <option value="frodo">Frodo</option>
  <option value="bilbo">Bilbo</option>
  <option value="Gan" selected="selected">Gandalf</option>
  <option value="Gal">Galandriel</option>
</select>
```

HTML

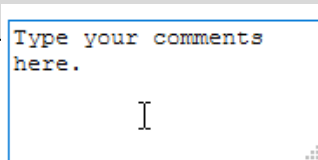

- option element represents each choice
- select optional attributes: disabled, multiple, size
- optional selected attribute sets which one is chosen

96

## Text boxes: <textarea>

```
<textarea rows="4" cols="20" name="comment">
  Type your comments here.
</textarea>
```

HTML

- initial text is placed inside textarea tag (optional)
- required rows and cols attributes specify height/width in characters
- optional read only attribute means text cannot be modified

97

## Text labels: <label>

```
<label> <input type="radio" name="cc" value="visa"
checked="checked" /> Visa </label>
<label> <input type="radio" name="cc" value="mastercard"
/> MasterCard</label>
<label> <input type="radio" name="cc" value="amex" />
American Express </label>
```

HTML

☒ Visa ☐ MasterCard ☐ American Express

- ☐ associates nearby text with control, so you can click text to activate control
- ☐ can be used with checkboxes or radio buttons
- ☐ *label element can be targeted by CSS style rules*

98

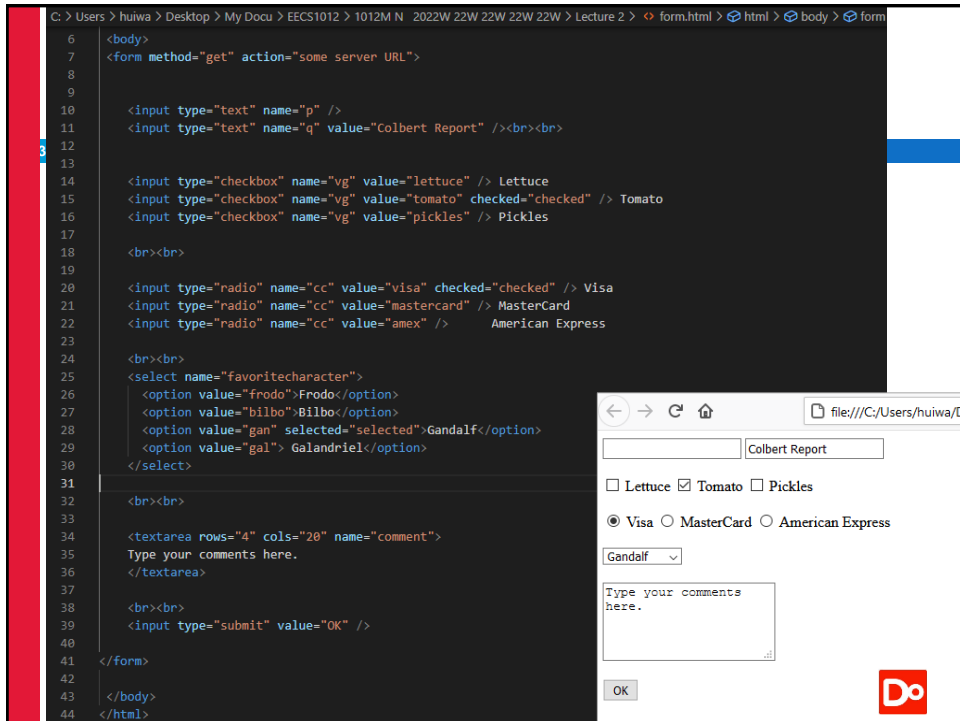

## Password input field, submit button: <input>

```
<input type="text" size="10" maxlength="8" /> NetID <br />
<input type="password" size="16" /> Password
<input type="submit" value="Log In" />
```

HTML

- ☐ **input attributes:** disabled, maxlength, readonly, size, value
- ☐ size attribute controls onscreen width of text field
- ☐ maxlength limits how many characters user is able to type into field

102

103

## Tables <table>, <tr>, <td>

```

<table style="width:100%" >
  <tr><td>1,1</td> <td>1,2 okay</td> </tr>
  <tr><td>2,1 real wide</td> <td>2,2</td> </tr>
</table>

```

HTML

```

1,1
2,1 real wide
1,2 okay
2,2

```

output

- table defines the overall table, tr each row, and td each cell's data
- Useful for displaying large row/column data sets
- Can be formatted (CSS) fancy

For your information

Column 0		Column 1	Column 2	
			Column 2a	Column 2b
Row 1	Row 1a	123	456	789
	Row 1b	123	456	789
Row 2		123	456	789

104

## Tables <table>, <tr>, <td>

```
<table style="width:100%" border=1>
  <tr><td>1,1</td> <td>1,2 okay</td> </tr>
  <tr><td>2,1 real wide</td> <td>2,2</td> </tr>
</table>
```

HTML

1,1	1,2 okay
2,1 real wide	2,2

output

- border=1   =0 for no
- This attribute has been deprecated in favor of CSS.

```
<style>
table, th, td {
  border:1px solid black;
}
</style>
```

105

## Tables <table>, <tr>, <td>

```
<table style="width:100%" border=1>
  <tr><td>1,1</td> <td>1,2 okay</td> </tr>
  <tr><td>2,1 real wide</td> <td>2,2</td> </tr>
</table>
```

HTML

1,1	1,2 okay
2,1 real wide	2,2

output

- border=1   =0 for noborder
- This attribute has been deprecated in favor of CSS.

```
<style>
table, th, td {
  border:1px solid black;
  border-collapse: collapse;
}
</style>
```

106

## Summary so far

- `<head>`
  - `<title>` `<meta/>` `<link/>` `<script>`
- `<body>`
  - `<p>``<br>``<hr>``<ul>``<ol>``<li>``<h1-6>`  
`<div>``<span>``<img>``<a>` `<header>``<footer>`
  - `<form>`: `<input>``<select>``<textarea>` ...
  - `<table>`: `<th>` `<tr>` `<td>`
- Lots more tags
  - `<pre>` `<code>` `<blockquote>`
  - `<aside>` `<nav>`

109

## Computer code `<code>`

```
<p>
  The <code>ul</code>
```

```
and <code>ol</code>
```

```
tags make lists.
```

```
</p>
```

HTML

The ul and ol tags make lists.

output

- code: a short section of computer code

For your information

110

## Preformatted text <pre>

**<pre>**

```
Bill Gates speaks
    You will be assimilated
    Microsoft fans delirious
```

**</pre>**

HTML

```
Bill Gates speaks
    You will be assimilated
    Microsoft fans delirious
```

output

- ❑ Displayed with exactly the whitespace / line breaks given in the text
- ❑ Shown in a fixed-width font by default

For your information

111

## Preformatted text <code>+<pre>

**<pre><code>**

```
public static void main(String[] args) {
    System.out.println("Hello, world!");
}
```

**</code></pre>**

HTML

```
public static void main(String[] args) {
    System.out.println("Hello, world!");
}
```

output

- ❑ When showing a large section of computer code, enclose it in a `pre` to preserve whitespace and a `code` to describe the semantics of the content

For your information

112

## Some (html5) style guide tips

5

- ❑ declare the document type
- ❑ use **lower case** for elements, attributes, etc.
- ❑ **close** empty elements too `<hr\>`
- ❑ use **quote** for attribute values
- ❑ do not use space in attribute values or around `=`
- ❑ provide **alt** attribute for **img** element
- ❑ separate long/logical blocks with **blank line**
- ❑ indent properly

115

## Some (html5) style guide tips

6

- ❑ do not omit **html**, **body**, or **head**
- ❑ set a meaningful **title**
- ❑ set a **viewport**

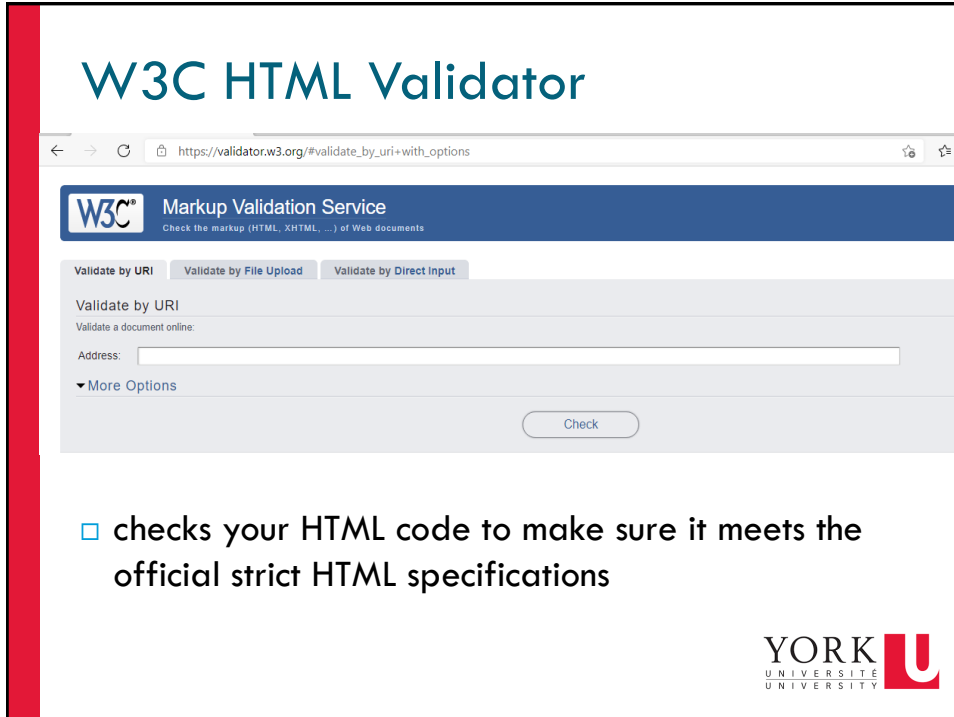

`meta name="viewport" content="width=device-width, initial-scale=1.0">`

- ❑ provide comments when needed
- ❑ use style sheets properly
- ❑ use javascript properly
- ❑ use **html validator**

116
